I use USB Logitech headset with microphone...my game runs somewhat choppy and laggy when I have them plugged in. However, when I unplug them my games performance improves ALOT and becomes smooth as silk...so in a nutshell: with sound the game runs poorly and without sound it runs like a champ.

I am using AC'97 onboard sound. Any help on this would be appreciated.

Also when I use my Logitech headphones, I can't use the VOIP feature correctly. I can record perfectly with them, even the VOIP configuration tool works great. But when I get online and hold down to "push to talk buttons" it only stats up for a second then goes away. Whats up with this? Once again help greatly appreciated here.
