Everything up to date, it's brand new, got it like 5 days ago. The CPU isn't overloaded when Renegade is running, both cores are a bit more than 50% used and the memory isn't fully used. Less than 75% used when running Renegade. I'll ask a friend to borrow me his English version to see... since he got a 733MHz with my old crappy VGA GeForce 2 and got same FPS as I do

Also the system is not hot at all when running the game, CPU stays under 32C and system same, so the poor performance isn't due to over heat

Your saying you got Radeon 9000 and got a 40FPS, I had 30FPS at max with my 9550 on a AMD Athlon 1.333GHz overclocked to 1.5GHz with 768 memory... I guess something wrong with my game or something :S
