Nightma12 wrote on Sat, 11 March 2006 14:53now that the Linux FDS has XWIS support, the number of Linux servers on Renegade will raise rapidly, im now considering adding Linux support into NR

i need some people to do some testing for me though! + i need some answers

what differences are there in the Linux FDS from the windows version other than the fact that they are windows + linux?

does it support RenRem?

also, could someone perhaps try to run the latest version of NR onto a Linux FDS running over WINE and see what results your get!

i personally dont have a Linux PC to test this on so its pretty much gonna be a shot in the dark for me

- 1) LFDS has no RenRem (you must use MacRem instead)
 - 2) SSAOW does not support the LFDS yet (this probably will change in the near future)
 - 3) I have a Linux PC at my grandparents' house...
