RenGuard 1.03 uses SVKP as a protection mechanism against hackers. SVKP is not a trojan. It is not a virus. It does not connect to some secret network and download secret stuff to your computer.

Spyware Nuker is complaining because there have been trojans which were protected by SVKP to make it harder for Anti-Virus companies to be able to learn how the trojans work. SVKP is not a bad thing, the trojans that abuse it are. You should tell Spyware Nuker to get a better team together, or you should use different Anti-Virus software.
