Well the guy who was going to make this into a playable map didn't have a good enough Video card to do so (damn).

So i need a guy who can import this .3ds into RenX, add all the W3D settings, put it into Level Edit and then add a few player spawners and guns.

Then export to a .pkg or a .mix

The person needs to have a good vid card to be able to handle the high poly count map.

if you could do this for me, i would really be very thankful!

I don't ask for much, but i really would like this done please.

Here is the file on ModX:
