Hey,

Can anyone explain me on how to setup Renrem. I tried it before but I could not get it to work. And since I would like to use it now.

Renegade Remote Server Management Tool

Version 1.11 - ST 7/25/2002 3:20PM

Usage: RenRem.exe <options> ip port password [local_port]

Options: -r=Request - Send the specified request to the server then quit

Bad parameters"

I tried: 83.203.123.xx 123password 40Xx

Can anyone show me a example on how to add it into the shortcut.

Thanks in advance,
