I had NightRegulator and a FDS. Some commands weren't working so I installed something to fix a bug. All it did was take away all the commands and caused more bugs. Vehicles spawn in middle of map, commands not work, fds lags EVEN MORE, ETC... I reinstalled fds and night regulator (which took me like two hours to find a serial code). Then one problem after another! It said the svrcfg_cnc had an error. It took me like a hour to figure it out and i finally fixed it. I was relieved when it didn't say ERROR, but a few seconds later it said Finding Game Channel... Failed finding game channel... trying again... and so on until it messed up. Can someone help me!
