Renx wrote...

While installing the FDS, when it prompts you to enter a serial, now you can enter any combination of numbers that is 22 characters long, and starts with 0669!

After the FDS is installed, the serial will no longer checked for authenticity, at all. Absolutely any combination of numbers for the serial in server.ini will work so long as it is kept at a length of 22 characters.

Quit posting that. It's out of date.
