when i start up renegade i go into internet thingy then i go into Westwood online then i click on advanced game listings. when i do that it goes to recieving server list or whatever then the FPS go down to 1/0 then i go back to main menu and it fixes itself. is this an issue with CP2 or is it my renegade copy thats been fine for the last 3yrs????? i've reinstalled it twice and done the patch the CP2 and it still is stuffed.
