SuSe, and all other binary distros suck. Gentoo or Gentoo/BSD please.

I've used Gentoo before. It's really annoying to have to compile every god damn thing you get.

Gentoo is designed for people who know which compile flags work best with their computer, and
are willing to tweak make.conf a bit.

I've found it a lot easier to use on 64-bit systems rather than depending of (often broken) 64-bit
packages from binary distros.
