oh yeah. everything that I could think of. Drivers and all. Still it runs at about 10-42. Less with alot of people. Now don't worry about my specs, they are way above the needed requirements. I only started receiving this problem after Corepatch 2. Now why is this happening when Renguard is supposed to make Renegade better, yet it ruins on-line play? I could rant on since most servers are Renguarded, but I would rather have help with this problem. Admin, this means you.
