Hi

New user, Hi to all.

My Scenario, Got FDS downloaded, Want renguard on it and then Bren(in time)

OK, so I have downloaded FDS, setup cfg, runs fine. So I thnk off to renguard.com to get the ssc.

The SSC just says extract the files. Where to ?

Now I am making an educated guess(this is where it all goes wrong) I put it into the fds server bit and run the file.

Run FDS again and looks fine. I have no idea if Renguard is running, which one do I run the server from, the FDS link or the RenGuard.exe ?

Now I know from running Renguard, I had to install a whacking great patch, with maps and everything. Server side ? Do I have to do anything.

All help will be greatly appreciated. Especially from a person or persons who knows what they are doing

Looking forward to getting back into the community
