Thanks for the info and suggestions!

Vid card is onboard, 256meg gForce, cable internet connect (48mps), never run anything else when playing the game, 1 gig RAM, 3.4 mhz processor, PC upgraded only 6 mos ago, had this problem before but once I upgraded to the new video card it stopped, then when my mouse died and I used another this problem started, and even now, with another \*newer\* gaming mouse it persists. Needless to say, it's extremely frustrating.
