Update to Renegade version 1.037 before installing Renguard.

I will give you the download link to the patch. Select the language version of the game you own. (Usually engish)

Please click on which version of Renegade you have.

English
Chineese
French
German
Japanese
Korean

WARNING: Downloading a patch that doesn't go along with the version of the game you have will corrupt your game!

@cmatt42:
I have yet to see Renguard make a misconception about the always.dbs and the always2.dat. The only time I have seen that error occur was because somebody did not update to the 1.037 patch before installing Renguard, hence my post. However there is a first time for everything, and if shkkf has the 1.037 patch already than the problem lies elsewhere. My point is I never took your post for being wrong.
