Merovingian wrote on Sat, 27 May 2006 19:54^^ well, i have: hijackthis, norton, lavasoft ad-aware, spybot search & destroy, and i think thats it.

i have run all of these and have found, overall, about 500 "bad/corrupted" files. all these have been fixed and still no luck. the problem is: "another program is using this file" but i dont know what that program is.

did you run it in windows safe mode?
