I've got the same problem over the last 6 months and it's pissing me off bigtime...sometimes it seems fixed, but then an hour later when I restart Renegade I get those annoying freezes again.

I defrag my PC all the time, have reinstalled Renegade over and over and had AVG Anti-Virus and Ad-aware scanning numerous times.

Pirate, did you ever do the BIOS stuff suggested here? Or did another virus scanner find something? I'll clean my fan anyway, but I'm kinda running out of options here since I share my internet connection with 4 other computers in the household.

EDIT: Renegade is the only game with these issues.
