Ok, here goes.

I didnt even know about this sbbo thing but apparently im using it. every server i go to the host tells me i am typing sbbo, but im not! i dont know what it is or what it does, and i am NOT typing it.

Can anyone help me? I dont know how to fix it and i keep getting booted because of it.

(some more information-I am not typing it, however i was told you must hit F8 and then type it. I am not sure what it does. I have dialup. I have microsoft AVG and anti-spyware, so i do not have any viruses. The only thing with F8 i know to do is FPS, which mine is 75. I do not know what or how the servers show i am typing it, but while i am talking to the hosts they tell me it shows that i am typing it. --hope that info helps some--)
