i installed renguard a while ago, but stopped play for a while now when i start up again....patch....so i go to www.renguard.com as everyone says. download renguard again* when i try to install it, a message pops up saying that file game2.exe already exists and intallation failed. so i go into programs take out game2.exe, now it wont install cause it needs to be in the directory.....

all i want to do is play renegade, WHY IS IT SOOOOO DIFFICULT!!!

if u got any help please post.
