I'm looking to buy a new computer soon-- If you want a good processor, I've heard that AMD's Opterons are very good, because they have a large (2x 1MB) L2 cache, plus you can get them for normal socket 939 Motherboards. They also overclock better, so (if you really want to) you could probably get them to FX-60 speeds. They're also a lot cheaper (they start at \$330 on Newegg). A good video card is the 7600GT. I believe that it's one of the best value cards under \$200.

It really depends on what you're looking for. Perhaps you should ask at THG.
