Quote:I tried it with my GeForce 7300GS and it removed all the text and my cursor from the screen.. I'll try installing the version of DirectX that was linked to but I already have 9.0c..

Edit: It will only work in windowed mode for me.. Dont Get It

And what kind of changes would I be able to see? I have everything set at the highest level normally so I don't see much of a difference.. :S

Did you check to see if your card was one of the supported cards on the list?

Quote:will this work on the FX5200 PCI cards too, or just AGP/PCI-e?

It works on either AGP or PCI versions of each of the supported cards.
