---

So today I decided to try and play Renegade online again after a long time... I never had problems with it even after the WOL to XWIS change, but this time I get to see this when I try to log in...

I can't reinstall the game because that would screw up some stuff with level edit. And even if I could im not even sure if it would fix this because well, I got 1 of those "cheap" copies EA sold a few years back and they didn't have valid serials with them...

Anyone know why the people that own XCC decided to do this?
