Certainly looks nicer, no real fps change (still a steady 75), but I had all the effects on full, using a radeon 9800se, and there are some nice effects ingame...

One problem... it causes renguard to crash on loading.. why is this? Renegade loads normally if you start it using game2.exe, but if you load renguard it crashes.... if this is not going to be compatable with rg I will have to remove it again..
