nopol10 wrote on Fri, 23 June 2006 05:24 Well actually, 700+ fps is at the screen directly before the map loading screen (joining game dialog box). At the menus, i get 100+ and in the game it drops to 50-70 fps.

And one question, how am I going to reinstall ATI's drivers if OmegaDriver screws up my system. (I haven't installed it yet.)

If you need to reinstall the ATI drivers simply download the latest one from the ATI site. Then uninstall Radeon Omega Driver form your add/remove programs list and run the executable to install the ATI one.

I doubt you will have any problems with it, I use the Omega drivers and I find that they are much more reliable than the ATI ones. The ATI Tray Tools also have some nice features that I use.
