danpaul88 wrote on Sat, 24 June 2006 14:06if you have xfire go to options and disable in-game support for renegade, because renguard bumps renegade to game2.exe, xfire tries to interface with renguard. For some reason it only causes crashes with this patch on... wierd
Or just point XFire at game2.exe (and tell it to use the right renderer or else you'll still get a crash).
