---

In order for me to get RG to work i would of had to reformatd my computer - which i truely didnt want to do -

so last night i formated - reinstalled windows and renegade - then installed RG - removed all the cute models i had and joined the Xphaze server - !RG myself as a few others did an i got it running

hurray for me lol

i hung around for a bit an talked to a few on irc to show that i got rg runnin finaly - then shut down

well this morning i finished installin all the updates for windows and loaded a few other games

i went to play renegade and once again i got the same stupid errors in RG that stoped me from installin it in the first place

any an all help in this would be nice
