Did you try going to Westwood - > Rengade - > Renegade Auto Update in your start menu? That should get you up to speed. At least I beleive that's how I got mine patched to the newest version when I reinstalled recently. 1.037 may be the newest version I'm not sure. Other than that... maybe you are set to look at another regions servers instead of the area you are in? US, Europe. Can you give us any more information?
