---

Hey guys,

I recently started up my server again (its half-renguard), but I have windows 2k Pro, and my Renguard was having a buffer overrun day, so I loaded up w/o renguard. Brenbot started up, sayed intilizing half-renguard mode, I join the server and its says I need to renguard to play in this server and I got kicked

Thanks for any help.
