AHHHHH This is getting REALLY annoying. I downloaded the first one, it completed and everything. But I have no idea how to get it activated... It won't run. I figured maybe it was Auto-when you got on, so I asked the Host and he said it's off. What do I need to do, anything OTHER than Un-Installing my Renegade... Cause if I do that, I have to Install the intire Decade again... And that takes forever.
