Hi Renegade fans,

I Play Renegade on an 28Inch 16:9 CRT widescreenmonitor, but if i set the resolution on
widescreen, e.g. 1280x720 or 1920x1080 then Renegade is all streched up.
So i need to edit the Field of View of the 3D view, anyone knows how to find and edit the FOV??
I've looked for cfg-files and looked in the register but i cant find it

thanks in advance,

greetz from Dereck
