I'm sure you're full of good will but to be honest: we already have a lot of regulators.

1. Brenbot, new version 1.43 in development by Packhunter
2. Nightregulator, by Nightma12, updated regularly
3. Cloudy server, by FnFall
4. Several private regulators

There really is no need for yet another one.

You could help with brenbot 1.43 maybe, which is coded in Perl and also allows plugins (in Perl).
