---

does anyone actually use these successfully?

i was on black-cell.net marathon yesterday, and GDI kept mammoth tank rushing unsuccessfully, even though they had about 3 or 4 mammys per rush.

these rushes were countered mainly with light tanks, stealth tanks, and mendozas. they had quite a few rushes, and i was in the same light tank for each rush.

sso then, are these really powerful, or were the drivers just n00bs?
