I'm very annoyed that I need to manually set the priority for my clan's servers each time it restarts. While it's only 10 seconds of work, it requires me to be online a lot if I want the priority to stay correctly at real time.

Is there a solution to get this automated? Did I read something about a BHS FDS release that did this? I didn't find it on their (unupdated) website.

Please help .
