2 Months ago my PC wouldn't boot, so I installed Windows on a fresh HD.

Now I have the OLD harddrive in my PC as F:\

This Hard drive has Renegade on it, with my serial.

The other one, my new "fresh" C:\ drive, has renegade on it with my FRIENDS serial.

Is there anyway to retrieve my serial from the F:\ disk so we can both play together again?

I can't start renegade from the F:\ part btw, because my WOL isn't configured correctly.. or something.
