Hey not only for fixing it but also for being there. I was pretty upset last night. I just needed to tell people about it and get responses. So everybody helped in some way.

I have gotten some things installed on here since, it's mad fast. CS:S with every setting cranked and AA and Anistropic all the way up I get 150fps. The only problem, is Fraps. I guess fraps has trouble getting the frames from both video cards and when I turn it on it drops to like 1 fps, then if I dont turn it off the game crashes.
