dead6re wrote on Sun, 13 August 2006 16:10 Why do you need a decent compiler for PHP, you don't compile PHP. You use the PHP.exe to run the script.

I was going to say that, but I assumed he meant something like PAR for Perl, which creates a .exe file of the Perl scripts, including all the necessary code to run the Perl scripts (so they can be used on machines without Perl installed). I am not aware of any PHP equivalent, but I am sure there will be several available, try looking on google.
