Looking to use this card when you get a new computer (if) I would look at either a GeForce4 (GF4) Ti4400 or the Radeon 9700. I like the nVida based GeForce series better so I would lean towards the Titanium series (the "Ti" in the title). There are newer ones out but there hasn't been much posted yet so a safe bet would be the GF4 Ti4xxx. They can run \$100 and I saw a generic after rebate for \$80-\$90 range.

Which video card was not compatible with your system?

eBax

P.S. BF1942 is a BEAR on the finest systems, you might get something playable with the ram and video upgrade but don't hold your breath.
