I have finally got plugins working! i have been working on it for a few days now, well here it is!

will be looking forward to a few comments...

it is easy to create them, just a dll with an exported function in the form:

```
const char * dllparse(char * message)
{
    //blabla
    return some_const_char_star;
}
```

remember to export and return "" if you cannot parse anything or it will be sent the the FDS!
