Ok i see the different types of video cards.

AGP or PCI

As well as DDR and SDRAM.

Im guessing I should get the SDRAM version but what about AGP and PCI?

So is it a SDRAM PCI or an SDRAM AGP?

EDIT: Ive got my eye on this one

MX 420 Features & Benefits

64MB SDRAM memory

2.7GB/sec. memory bandwidth

Delivers the industry's best 2D/3D graphics performance in a mainstream graphics card

Unique maroon-colored board

Ultimate 3D Gaming Support

Integrated Dual 350MHz DACs

NVIDIA Video Processing Engine (VPE)

Resolution

Unified Driver Architecture (UDA)
