
Subject: can macrem support the /ip=xx.xx.xx.xx option to the LFDS?

I have a linux box with multi ip address.

If I don't pass the /ip option to the renegade_server_1037b_rh7-3, it bind to the eth0 IP.
the solution is

```
./renegade_server_1037b_rh7-3 /ip=xx.xx.xx.xx
```

but when I try to run macrem (renegade_server) with the /ip option...

```
./renegade_server /ip=xx.xx.xx.xx
```

it doesn't work, may mac release version 0.4 to fix this?

Thanks,
howang
