well if you look at his second screenshot the server cant make a game channel, so something is wrong in his server.ini or svrcfg_cnc.ini files, probably server.ini.

Check the nickname your using is not in use, that your using the right password, and your serial is valid.

EDIT: And please upload any new images as attachments here, not on imageshack, because imageshack resizes them so you cant read it properly, which makes it harder for us to help you
