2)Blaser, the video can be streamed
3) when someone posts with a faster speed.

Good to know that it can be streamed. I know that my server can handle the upstream, I just didn't know how much downstream speed you would need to watch it without rebuffering.

P.S. If I download it at home I get 625KB/s. If I download it at work, over 3MB/s

that was number 3 lol, although depending on the server traffic i have had nearly 1 Mps:
(this the bit-rate on this pic went over 1Mps but it went down at the last miniut)

remeber this is a personal conection.
