Xylaquin wrote on Fri, 01 September 2006 19:02Ok just one more question about the FX5200 (i'm not saying I'm buying it, it's just i asked this question a few posts ago and it wasnt answered).

For those who have 256mb card, what FPS do you get playing Ren on high settings?

I'm no graphics card genius but i'd say from experience that the MB don't really matter, just a marketing ploy, the thing that does effect performance is if your card is a 'high end' model for example

geforce 5200 - cheap <-- low end
geforce 5800 - expensive <-- high end

geforce 6200 - cheap <-- low end
geforce 6800 - expensive <-- high end

some people say that a geforce 5800 is better than a geforce 6200 purly because of it's make up giving it better performance, weather your chosing between a 128 mb or a 512 mb it don't really matter unless your playing extremely demanding games. I've only noticed a drop in performance when using a 32 MB graphics PCI card.
