I have a lan exploiter to report. I was just watching the mIRC logs in my admin channel when I spotted this. It starts when he joins and ends on part. He bascily name hacked 3x. The first time it wasnt caught (banned). The second 2 they were IP banned. I would like to ask if something can be done about this...

Im not sure if this is enough proof. But if i remember correctly crimsom can pull up IP's on logins / parts etc. Perhaps this can show what happened?

First Time.
