I know how to that(I think), this isn't to hard, I figured it out be my own.

You need to replace the cargo drop. there are 2 heli drop animations, 1 works correct the other not.

You need to change to cargo drop animation, and replace it with a special text. (this works also server-sided)

Use my .txt and plac it in your folder(you can change the name freely) go to Object-> Simple-> CnC Cinematics -> and temp a present using the Test_cinematic script, fill my GDI Trans Drop.txt in (ore the other name). now go to building-> Airstip-> and use the airstip ore temp one for GDI. Look at the settings and change the Drop-Off Cinematic the the temped present under CnC Cinematics.

It should work!

I also hope this will help you
