Yesterday i have tested the remote connection with telnet to the server. I can connect, the server asks the password but then the server disconnet me.

Currently i don't know why i can't connet to it.

Does it just "disconnect you", or does it say invalid password? Here is an example of successful and unsuccessfull connections to the XWISP macrem connection (everything prefixed by > is something that I typed):

Unsuccessful Login

```
>$ telnet 1.2.3.4 5000
```

```
Trying 1.2.3.4...
```

```
Connected to blah (1.2.3.4).
```

```
Escape character is '^]'.  
password
```

```
>blah
```

```
>blah
```

```
Invalid Authentication. Failed access attempt logged.
```

```
Connection closed by foreign host.
```

Successful Login

```
>$ telnet 1.2.3.4 5000
```

```
Trying 1.2.3.4...
```

```
Connected to blah (1.2.3.4).
```

```
Escape character is '^]'.  
password
```

```
>myrealpass
```

```
>myrealpass
```

```
accepted
```

```
>game_info
```

```
Connection closed by foreign host.
```

You should be getting similar behavior to one of these.
