Subject: javascript load function to select radio forms
Posted by reborn on Thu, 05 Oct 2006 15:40:45 GMT

I am trying to make a web based client for a small group of people to send files to a print room, and also have it send some information gathered by them filling in some forms. I have pretty much no experiance with javascript and have only made a shitty website before in HTML, so please forgive this attempt, I know it is far from inspiring.

Here is my problem...

I have created a java script function to load details into form when the client selects a particular drop down menu, but have only made it load the details into text type inputs. However I want to create a second load function (function loaddetails(2)) that will change the values of the radio inputs (at the moment it is just there totest that i could put two java scripts in one page and have them called separetely). But I do not know how to do it. Can someone take a look at how I made the first java function and advise me on how to create the second one please?

Also please note that I realise that the file input type at the end isn't going to work, and show really make it a separate form, but I have not wriiten the asp script yet to handle the upload so i just shoved it there for now.

Here is the code:

Code:

```
<html>
<head>
<title>Spencer's reprographic print submission tool</title>

<script type="text/javascript">
 function LoadDetails()
  {
    if (document.ticket.select.selectedIndex == 0)
   {
      document.ticket.name.value = '';
 document.ticket.extension.value = '';
 document.ticket.department.value = '';
   }
   if (document.ticket.select.selectedIndex == 1)
   {
      document.ticket.name.value = 'Spencer Elliott';
 document.ticket.extension.value = '56656';
  document.ticket.department.value = 'Document Services';
document.ticket.email.value = 'censored for the net';
   }
 if (document.ticket.select.selectedIndex == 2)
```

```
    {
        document.ticket.name.value = 'Trevor Murphy';
    document.ticket.extension.value = '56437';
    document.ticket.department.value = 'Document Services';
document.ticket.email.value = 'censored for the net';
    }
}
function LoadDetails2()
  {
     if (document.ticket.select2.selectedIndex == 0)
    {
  document.ticket.extension.value = '';
    }
     if (document.ticket.select2.selectedIndex == 1)
    {
  document.ticket.extension.value = 'test2 works';
    }
}

</script>

</head>
