Allright, so a buddy pulled me into renegade modelling. Although i cant even model a cube in renx, i felt like trying out 3dmax 8. So i installed the 30 day trail. I than downloaded the w3d tools ea released (way too late). I dropped all the files where they should be dropped, fired up 3dmax, and got this cute error.

In total shock i doublechecked the readme, but no good.  
I probably just forgot something even a retard can do...

help

edit: the dutch part says "cant find the requested module"  
and yes, im sure everything is in place, at least i hope so
