coolmantAspenth

Your server owns! Where do you get the bandwidth for your server? Can I rent one from someone? Thanks.

My server is hosted by HostOnce(URL is .com respectively). Since I purchased the hosting back in October, they were offering unlimited space/bandwidth for \$4.95 a month, so therein lies the reasoning why the speed isn't so great. As of recently, however, they changed their plans to no longer unlimited resources, and the price has been bumped to \$6.95 a month. For current customers though, like myself, these changes mean nothing, so I still retain unlimited bandwidth.
