CarrierII wrote on Tue, 31 October 2006 14:42 Thought I'd like to note: AMD's don't shutdown on overheat, they just melt themselves... :s

Not anymore since AMD64 they don't Intel already had this protection in p3/4.

As for TS it would be handy if you would post some more information OS, driver versions, pc spec's ecta.. it could be many things and the only way your going to find out is by stripping the pc if its hardwarematic.
