K9TrooperYes, because I had it fuck up my OS. I did use the WIN98 disk and it messed it up. It may work for a doul boot between 2 WIN OS' but you are looking at 2 totally different systems.

Yeah but you make it look like I didn't know what I was talking about. I do this all the time at work when I need to fdisk something. You just got to know what you are doing. And plus all Yano asked for is fdisking. I was just telling him what to use to fdisk.
